

A Tradition of Quality.

CUTTERMASTER has been the best name in bench top end mill sharpeners since 1972 and that tradition of quality continues with the our professional version. The Cuttermaster Professional CMX has been designed with new features to meet the demands of today's prototype and production shops, and provides superior flexibility and ease of use for tool regrinding and tool modifications.

The Corner Radius file has been created to compliment the end grinding process on the Cuttermaster Pro. You can produce a small corner radius without setting up a radius grinding attachment.

Corner Radius Hone

Diamond Corner Radius files for Edge Prep and Profiling Corner Rads on end mills.
Radius profile +/- .004 , These High quality files have a synthetic Diamond 200 Grit Surface and are bonded .0016 with Hard Nickel.

The files are .031 , .062 Radius and are ideal for producing small rads.
Carbide End Mills should always be corner and edge prepped after regrinding or even before initial use.

A small corner Radius will increase the life of a carbide tool 2 or three times by preventing premature corner failure.
